Tutorial on Advanced Query building

This tutorial assumes that you have reviewed and understood the presentations on sets, sub-queries, views, relational divide and building advanced queries.

If you want to do this on your own machine or in your own schema, create a new schema and download and run the script 'advanced queries tutorial setup.sql'.

/*   ADVANCED QUERIES   */
--1. Return a list of clubs that all undergraduate students joined (studylevel = 'UG')

--2. Return a list of students who only joined clubs based in the Kevin Street campus.

--3. Return a list of students who joined all SPORTS clubs.

--4. Return a list of students who joined NetSoc or Swimming, but not both.
